* NOTE: This is a 'working draft' sequence. It currently consists of 196 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence * as soon as it is available and the accession number will * be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               25 GGCGCATTTTTTAGCTGATCATTGTCGAAACGCTGGCGTGGTTTACCCGCTCGTTGCCAC
                                                                                        * NOTE: This record contains 8 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
be preserved.

Submitted (10-JAN-2000) Production Sequencing Facility, DOE Joint
Genome Institute, 2800 Mitchell Drive, Malnut Creek, CA 94598, USA
On Feb 16, 2000 this sequence version replaced gi:6686434.
* NOTE: This record contains 244 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
                                                                                                                                                                                                                                                              gap of unknown length

ö
           Novel Escherichia bacterium having enhanced L-threonine resistance due to enhanced Rhtc protein activity, used to produce L-threonine, L-homoserine, L-valine and L-leucine -
                                                                                        The present sequence is the L-threonine resistance gene, rhtC, from Eschericha coli. This sequence may be used to impart L-threonine resistance on E. coli bacteria, which would be useful for producing a high yield of L-threonine. L-threonine resistance means that the bacteria will be able to grow on a minimal medium containing L-threonine at a concentration at which the corresponding will-threonine at a concentration at which the corresponding will-type strain would not grow. Since the transformed bacteria can grow on the minimal medium, it can synthesise L-threonine, which accumulates. The accumulated amino acids can then be removed from the culture medium. The bacterium of the present invention may also be used to synthesise L-homoserine, L-valine and L-leucine at increased levels.
                                                                                                                                                                                                                                                                                                                                                             180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       366

The present sequence is the yahN gene (an excretion protein gene) of sechericals coll. The amino acid excretion protein produced from this gene is involved in the production of amino acids, and an increase in its expression leads to an increased accumulation of amino acids in the cell. In this case, an increase in lysine, glutamic acid and proline is achieved if multiple copies of the gene are transfected into a bacterium. The bacterium used is E. coli.
                                                                                                                                                                                                                                                                                                                                                                                                                                  production of L-amino acids by an Escherichia bacterium increasing the expression amount of an L-amino acid excretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           tgttcgtgattactttttttaatccgggagccaatctctttgtgggtagtacaaaccagcc 136

This sequence represents a Stealth virus nucleic acid clone. The invention relates to a method of detecting and characterising a stealth virus by reacting a sample suspected of containing a stealth virus with a probe from a known stealth virus and sequencing the resultant isolated nucleotide. The method comprises the steps of: (a) isolating DNA or RNA from a sample suspected of containing a stealth virus, e.g. a culture of cells showing a viral cytopathic effect; (b) testing the reactivity of the isolated DNA or RNA with a molecular probe that contains at least 18 or more contiguous nucleotides identical to sequence previously identified from a stealth virus; and, optionally (c) sequencing the isolated DNA or RNA whith a molecular probe that method is used to detect stealth virus in a biological product, food or in the environment. The method is also used to evaluate agents for their chibitory or stimulatory effects on stealth virus replication and to cherential capacity of the virus to recombine with and potentially alter the nucleic acid sequences of a cell or bacterium.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                  The present sequence is the yeas gene (an excretion protein gene) of schericals coll: The amino acid excretion protein produced from this gene is involved in the production of amino acids, and an increase in its expression leads to an increased accumulation of amino acids in the cell. In this case, an increase in lysine, alamine, valine, histidiane, isolaucine, glutamic acid and proline is achieved if multiple copies of the gene are transfected into a bacterium. The bacterium used is E. coli.
                                                                                                                                                                                               Increased production of L-amino acids by an Escherichia bacterium comprises increasing the expression amount of an L-amino acid excretion protein -
                                                                                                                                                                                                                                                                                                                                                                                                                                      318 cgagctggcgaaaagtgggcgcagtttcctgaaaggtttactgaccaatctcgctaatcc 377

                                                                                                                                                                          This sequence represents a gene encoding a subunit of the cellulose synthase complex of Vigna angularis. The invention relates to subunits cellulose synthetic equipment, that can be used to increase the amount cellulose synthesised by a plant. The proteins and genes encoding them can also be used to improve the properties of the cellulose being produced by a plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9728 AYDACYDAYDANCYSSDSTYTBYCSRRCCCYYDAYSCSRYDARCYDACYSYSNSTCYDAT 9669

Grobacterium vitis hypersensitivity response (HR) elicitor proteins adjoined with the active defence of plants against many pathogens, and occurs when a pathogenic organism interacts with a nonhost plant is associated with the active defence of plants against many pathogens, and occurs when a pathogenic organism interacts with a nonhost plant (i.e. one in which intracellular bacterial growth and disease development do not occur). Like other HR elicitors, the A. vitis elicitor functions in non-host plants by causing a rapid hypersensitive response that results in walling-off and killing of the pathogen. On grape plants, the A. vitis of plant cells and induction of pathogen resistance. A. vitis HR elicitor proteins, in non-infectious form, are used to treat plants or their seeds to impart resistance to disease, such as those caused by fungi, bacteria or vituses; and to enhance growth, e.g., to increase yield or to provide carlier germination or maturation. The proteins can also be used to control insects, to impart resistance to environmental stresses, e.g., cold, and to improve nutritional value, e.g., altered oil content. The same effects can be produced by producing transgenic plants or seeds by incorporation of Day that encodes A. vitis HR elicitor proteins. The proteins of the provide same effects can be produced by producing transgenic plants or seeds by a vitis HR elicitor proteins. Ose of a vitis HR elicitor proteins. Suppose that is a rapid, localised necrosis that is associated with the active defence of plants against many pathogens, and cocurs when a pathogenic organism interacts with a nonhost plant is associated with the active defence of plants against many pathogens, and cocurs when a pathogenic organism interacts with a nonhost plant (1.e. one in which intracellular bacterial growth and disease development do not occur. Like other HR elicitors, the A. vitis elicitor functions in non-host plants by causing a rapid hypersensitive response that results in walling-off and killing of the pathogen. On grape plants, the A. vitis elicitor induces a restricted necrosis of tissues, resulting in the death of plant cells and induction of pathogen resistance. A. vitis HR elicitor proteins, in non-infectious form, are used to treat plants or their seeds to impart resistance to disease, such as those caused by fund; bacteria cor viruses; and to enhance growth, es, to increase yield or to provide earlier germination or maturation. The proteins can also be used to control insects, to impart resistance to environmental stresses, e.g., cold, and to improve nutritional value, e.g., altered oil content. The same effects can be produced by producing transgenic plants or seeds by incorporation of DNA that encodes A. vitis HR elicitor proteins. Use of A. vitis HR elicitor proteins, or nucleic acids encoding them, may allow control of previously untreatable diseases; provide systemic treatment; and eliminate the need for biological control agents or polluting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             992 tggccgttctcagccccggcgcggattttgccatggtgtcgcgcaatagttttctttatg 1051
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1052 gccgcaaatccgggctggcggcctcgatgggcattgccattgcctgctggtttcatgtga 1111

Novel nucleic acids and peptides derived from open reading frame X, useful for treating e.g. cancers, proliferative disorders, neurodegenerative disorders and cardiovascular disease -

Claim 5; Page 1566; 5507pp; English.

cytyto to C77606 encode the proteins given in B40237 to B43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; antiparkinsonian; nootropic; neuroprotective; osteopathic; antiparkinsonian; nootropic; neuroprotective; osteopathic; antiparkinsonian; nootropic; neuroprotective; osteopathic; cardiant; thrombolytic; coagulant; vasotropic; antidabetic; hypotensive; dernatiological; immunosuppressive; antidiabetic; hypotensive; antiviral; antifungal; antithreumatic; antithryoid; and antianaemic. The sequences can be used for determining the presence of or predisposition or preventing or treating pathological conditions associated with an organizated disorder. The nucleic acids can be used to express OREX proteins in gene therapy vectors: The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative cused to treat cancers, proliferative disorders, neurodegenerative disorders storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders and section and antide and a disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, nocturnal haemoglobinuria, antiinflammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive

Sequence 565 BP; 122 A; 169 C; 148 G; 126 T; 0 other;

This genomic DNA sequence encodes insecticidal toxin protein Teah (see W17888-89) of Photorhabdus luminescens, a component of a toxin protein complex. Claimed toxins of P. luminescens (see W17871, W17884-89, W17899-900, W18301-06) can be produced by recombinant DNA methods and applied to, or genetically engineered into, insect larvae food and plants for insect control. The photorhabdus toxins are particularly effective against Southern corn rootworm, Colorado potato beetle, Western corn rootworm, meal worm, boll weevil and turf grub (Coleoptera), beet armyworm, black cutworm, cabbage looper, codling moth, corn earnyworm, black borer, tobacco hornworm and tobacco budworm (Lepidoptera), and are also active against insects of the orders Hymenoptera, Diptera, Dictyoptera, Acarina and Homoptera. (All claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Photorhabdus sp. insecticidal protein toxins and DNA encoding them can be genetically engineered into insect larvae food and plants for insect control

primers used in the exemplification of the present invention. The polypeptides, the polynucleotides, antibodies and compositions of the invention can be used as vaccines, as diagnostic reagents, and as immunogenic compositions. The polypeptides can be used in the manufacture of medicaments for treating or preventing infection due to Neisserial bacteria (e.g. meningitis and septicaemia), to detect the presence of Neisserial bacteria, or to raise antibodies. They may also be used to screen for agonists or antagonists, which may themselves have use as antibacterial agents. The polyuucleotides of the invention may also be used in gene therapy protocols.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /*tag= a /note= "this nucleotide is represented as a * in the specification, and is included to maintain the base numbering given in the specification"

                                                                                                                                                                            The DNA fragment encoding carboxyl esterase (CE) in B.subtilis Thai 1-8 (CBS 679.85) (Bell-HindIII fragment of 2kb originating from pNAPT-2 (see EP-233656)) was cloned into vector pTZ18R. Single-stranded DNA was prepared and subjected to oligonucleotide directed mutagenesis. Eleven different mutagenesis reactions were performed in order to substitute the 11 yaine residues of CE one at the time by a glutamine residue. The resulting mutant esterase was produced in E.coli DHI (ATCC 33849) and tested for stability in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               presence of (S)-naproxen. The wild type enzyme is encoded by a DNA at least 70% homologous with this sequence (NNN-Lys in the wild type.) and is itself 70% homologous to the B subtilis esterase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human adenosine Al receptor antisense oligonucleotide fragment.

The present sequence is that of open reading frame (ORF) mtbn6 (partial) of Mycobacterium tuberculosis. This is 1 of 8 ORFs (see A89075-42) identified as being present in the genome of M. tuberculosis but absent from the genome of the BCG strain of Mycobacterium bovis. The proteins encoded by these ORFs, i.e. MTBNN-8 (see B19842-49) represent reagents that are useful in discriminating between M. tuberculosis and BCG and, in particular, of or diagnostic methods which discriminate between exposure of a subject to M. tuberculosis and vaccination with BCG. The invention features these MTBN polypeptides, functional fragments of them, DNA concoding them, vectors, transformed cells, and diagnostic, therapeutic, and prophylactic (vaccine) methods, including genetic concoding methods.
                                                                                                                                                                                                                                                                                                                                                                   Novel polypeptide encoded by open reading frames present in Mycobacterium tuberculosis genome and not by the BCG strain of M. bovis, useful as vaccine and for diagnosing tuberculosis infection
                                                                                                                                                                                                (PUBL-) PUBLIC HEALTH RES INST NEW YORK,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Qγ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The specification describes antisense oligonucleotides (X52869-X55271)
directed against at least 2 mRNAs selected from target genes, coding and
non-coding regions of RNAs corresponding to target genes, coding and
initiation codons, genomic flanking regions, intron-exon borders, the
initiation codons, genomic flanking regions, intron-exon borders, the
5'-end, the 3'-end and the juxta-section between coding and non-coding
regions and all segments of RNAs encoding proteins associated with one
or more diseases, conditions or mixtures. The antisense oligonucleotides
configuration or mixtures. The antisense oligonucleotides
in may be derived from sequences X55272-74. These multiple target
oligonucleotides (specifically X5180-271) can be used for the antisense
treatment of diseases and conditions. Typical diseases and conditions
are those associated with impaired respiration and inflammation,
allergic rhinitis, acute asthma, allergies, asthma, impeded respiration,
allergic rhinitis, acute asthma, allergies, asthma, impeded respiration,
respiratory distress syndrome, pain, cystic fibrosis, pulmonary
reprirension, pulmonary vascoconstriction, employsema, chronic obstructive
pulmonary disease (COPD), and cancers such as leukemias, lymphomas,
carcinomas e.g. colon cancer, breast cancer, lung cancer, parcreatic
metastasized to the lungs, including breast and prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

This DNA sequence comprises Mycobacterium bovis BCG deletion sequence BCGdeltal. A specific genetic deletion of this region results in an avirulence phenotype of the mycobacterium. 2 Other deletion regions (see T35353 and T3537) have also been detected. Identification involved screening a BCG cosmid library with a radionabeled probe obtained following DNA subtraction between virulent Mycobacterium tuberculosis H37Rv and avirulent BCG. The deletions provide useful markers for the identification of an virulent, or a virulent, mycobacterial phenotype. Determination of avirulence requires the detection of the presence or absence of the deletion; the deletions are detected either by detecting the presence or absence of deletion junctions (see T3358-46), or by checking the presence or absence of absence of the sequences contained within the deletion. Deletion polypeptides are used as components of immunological assays and in vaccines.
                                                                                                                                                                                                                                              Detecting markers for avirulence in Mycobacterium – used in
production of vaccines against bacterial infection, and to detect
bacterial infection

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 539,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 16, Application US/08390878
Patent No. 5706683
GENERAL INFORMATION:
APPLICANT: Stover, Charles K.
APPLICANT: Mahairas, Gregory G.
TITLE OF INVENTION: VIRULENCE-ATTENUATING GENETIC DELETIONS
NUMBER OF SEQUENCES: 18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Length 431;

Application US/09067626
Patent No. 617086
CENERAL INFORMATION:
APPLICANT: Riley, Lee W.
APPLICANT: Nathan, Carl F.
APPLICANT: BLT, Sabine
TITLE OF INVENTION: DNA MOLECULE CONFERRING ON MYCOBACTERIUM
TITLE OF INVENTION: TUBERCULOSIS RESISTANCE AGAINST ANTIMICROBIAL REACTIVE
TITLE OF INVENTION: OXIGEN AND NITROGEN INTERMEDIATES
NUMBER OF SEQUENCES: 13
CORRESPONDENCE ADDRESS:
ADDRESSEE: Nixon, Hargrave, Devans & Doyle LLP
STREET: CLIATOR SQUARE, P.O. BOX 1051
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    7930 cceceeeeeeeeearcecarreeeererrerrereaceaareceeccaaecreaceere 7989

Petermination of this BAC-end sequence was carried out as part of a collaboration with the Berkelsy Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitliy.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and haron Amamoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswall Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNR provided by the BDGP from the isogenic strain v2: cn bw sp., the same strain used for the BDGP's pl and bST libraries. A more detailed description of the library, or filters for hybridization from the BACPAC Resource Center can be Location/Quallifiers

- Determination of this BAC-end sequence was carried out as part of a

collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and mannoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

- Gollaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila
melanogaster genome using these BACs. For further information
please see http://www.fruitfly.org The BDGP Drosophila
melanogaster BAC library was prepared by Kazutoyo Oscoegawa and
Aaron Mammoser in Pieter de Jong's laboratory in the Department of
Cancer Genetics at the Roswell Park Cancer Institute in Buffalo.

NY. The library is named RPCI-98 and was constructed by partial
sogenic strain of Drosophila DNA provided by the BDGP from the
isogenic strain y2; cn bw sp, the same strain used for the BDGP's
and how to order indyvidual BAC clones, the entire library or
filters for hybridization from the BACPAC Resource Center can be
found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Print Juvo Evyn Cedea. France (E-Mall: sequergenoscope.cns.IT Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI disestion of Drosophila DNA provided by the BDGP from the isogenic strain v2; on bw sp, the same strain used for the BDGP's and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
